

Blacksburg Day 1

4 persons

Exhaust fan, once started cannot be stopped or reversed

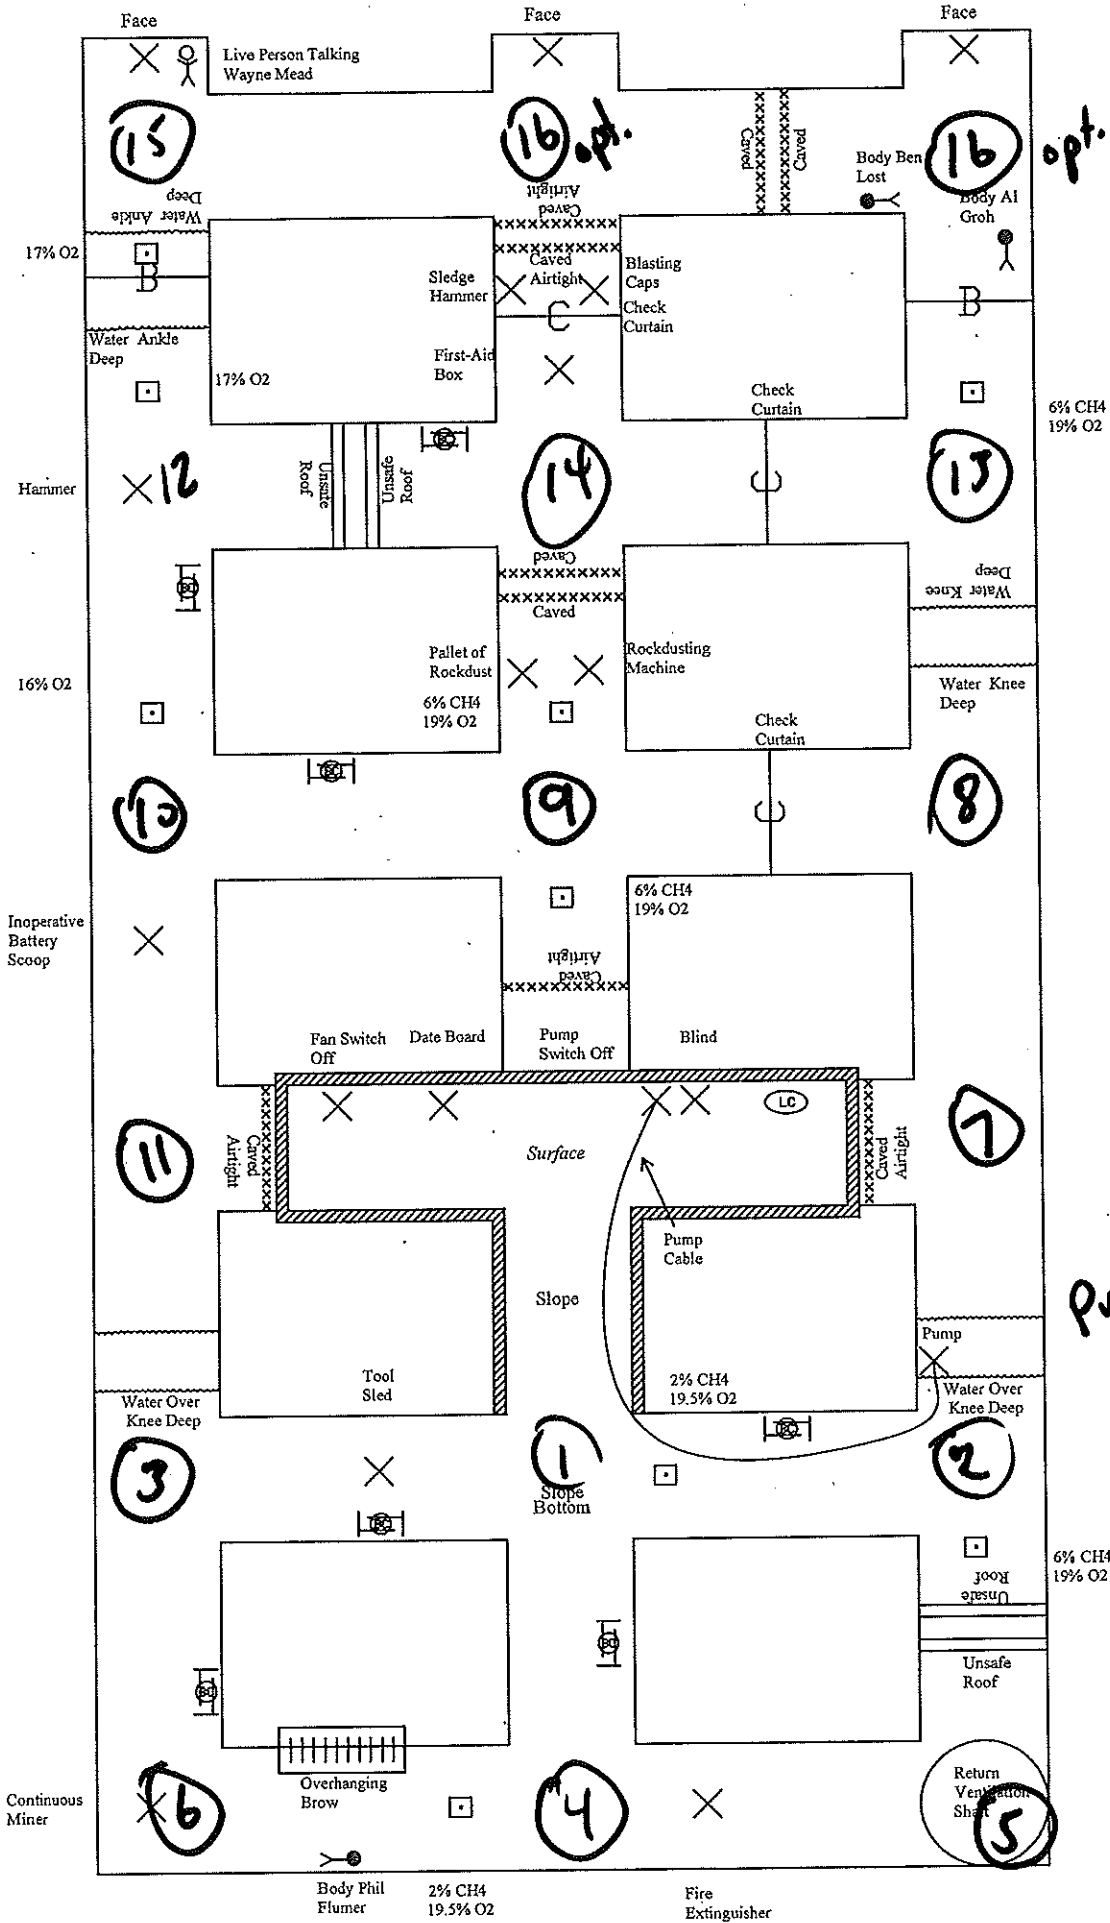

Report following to command center before moving team

1. explosive mixtures
2. ignition sources
3. all persons or bodies names and locations

Account for missing persons and bring survivors to the surface.

The hashed part of the map is the fresh air base on the surface. Once you get the team in that area you can rope it off where the caved airtights are. You do not have to explore last open if you don't want to but it will require an FPA on the map in 1 right
